ZENVORA

Single-page e-commerce website with inventory management

PROJECT REPORT / 2026

Submitted by: _____

Class / Roll No.: _____

01 / INTRODUCTION

Project overview

A small online shop concept with a built-in stock room for the shop owner.

- Brand: Zenvora, a curated everyday-goods store
- Customer side: browse, filter, sort, and add products to a bag
- Admin side: add products, search stock, and adjust quantities
- Built with HTML, CSS, and JavaScript; browser storage keeps demo data

PROJECT AIM

Make shopping and day-to-day stock updates feel like parts of one simple tool.

Note: this demo saves data in this browser only. It is not connected to a real database or payment service.

02 / PLAN

What I wanted to build

I planned the main customer journey and the basic store-owner workflow first.

01

Shop

Landing section, product categories, and a scannable product grid.

02

Bag

Quick add, quantity controls, and an updating subtotal.

03

Stock room

Inventory totals, stock statuses, search, and quantity adjustment.

04

Finish

Responsive layouts, local persistence, and a hand-in checklist.

03 / PROMPT

Prompt used to shape the website

Lovable-style prompt used as the starting brief for the interface.

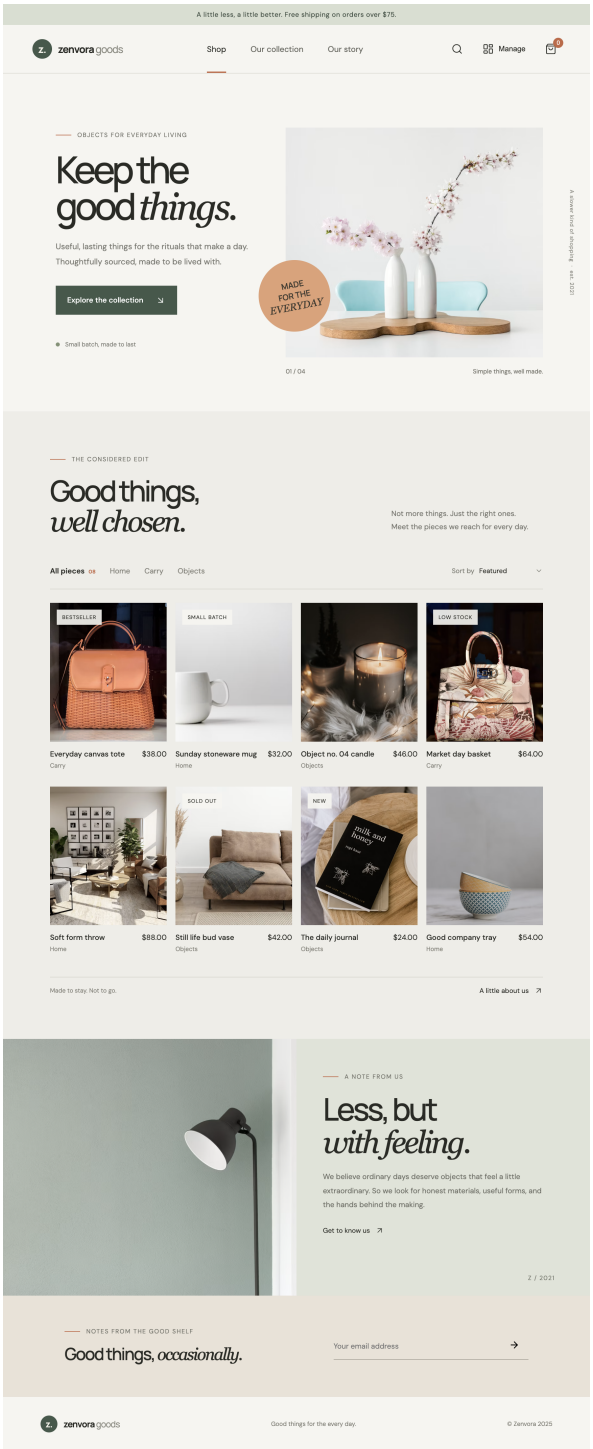

> “Build a responsive, single-page e-commerce website for a curated everyday-goods brand called Zenvora. Use a warm editorial visual style, product filters and sorting, an add-to-bag interaction, and a separate inventory management panel. The inventory panel should show product count, stock value, low-stock and out-of-stock totals, searchable products, stock adjustment controls, and an add-product form. Use accessible controls, realistic sample products, and local browser storage for this prototype. Keep the customer storefront and inventory dashboard easy to switch between.”

The actual project is implemented with plain HTML, CSS, and JavaScript.

04 / CUSTOMER VIEW

The storefront

The product list can be browsed by category and sorted by price or name.

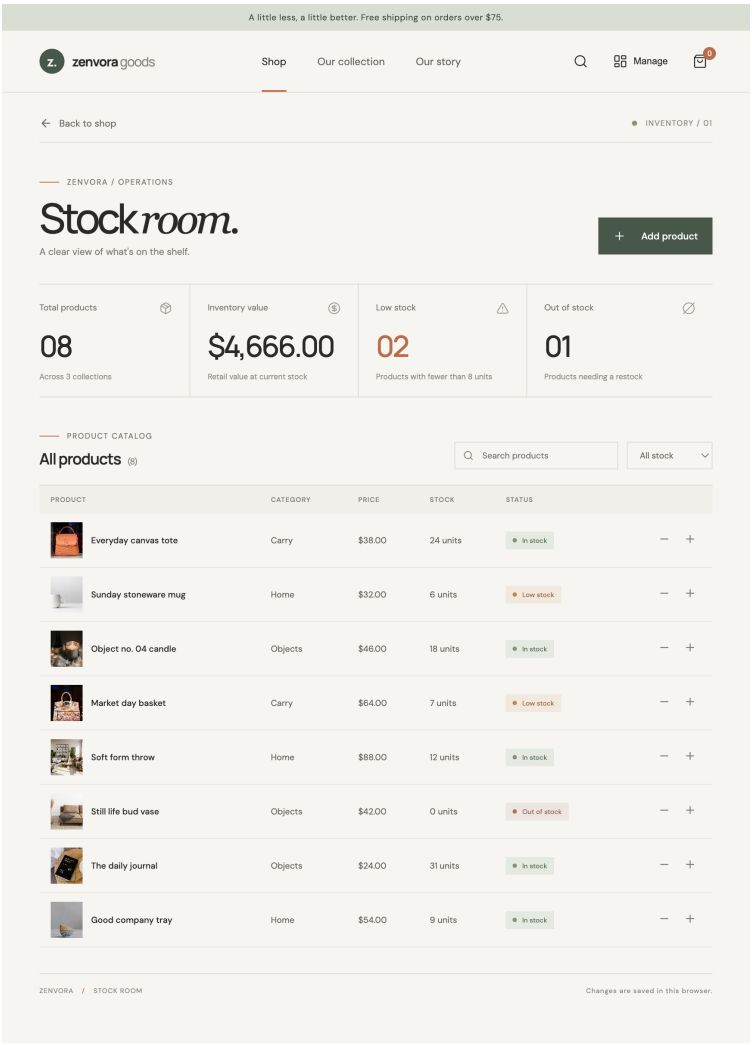

- Zenvora storefront and brand identity
- Eight sample products across three categories
- Quick add-to-bag interaction and quantity controls
- Story and newsletter sections complete the single-page layout

05 / STORE OWNER VIEW

Inventory management

The Manage button opens a working stock panel alongside the customer shop.

- Inventory value is calculated from price × stock
- Low stock is fewer than 8 units; zero units is out of stock
- Search and stock-status filters narrow the table
- Plus/minus controls update quantities; the form adds products

06 / LOCAL SETUP

Run and test the project

These are the commands used from the project folder.

1	**Install**	npm install
2	**Start locally**	npm run dev
3	**Create production build**	npm run build
4	**Generate report files**	npm run docs

The site uses a Vite development server. The generated dist/ folder is the deployment output.

07 / GITHUB

Save the code on GitHub

The project has a GitHub origin configured. Push access depends on account authentication.

- Open the project folder and review the files
- Run: git add .
- Run: git commit -m "Build Zenvora store and inventory panel"
- Run: git push -u origin main
- Confirm the latest commit appears in GitHub

REPOSITORY

github.com/Sujal9r/E-Commerce

A remote is configured, but no commit or push has been made from this workspace.

08 / VERCEL

Deploy with Vercel

Connect the GitHub repository to Vercel to get a public website link.

- Sign in to Vercel with the GitHub account
- Add New !’ Project, then import Sujal9r/E-Commerce
- Framework preset: Vite; build command: npm run build
- Output directory: dist; root directory: project root
- Select Deploy and wait for the build to finish
- Copy the generated Production URL into the assignment

LIVE WEBSITE URL

Pending Vercel deployment: paste the real URL here.

09 / DRIVE AND SUBMISSION

Share the files with your teacher

Upload the finished PDF and PPTX to your own Google Drive account.

- Upload Zenvora_Project_Report.pdf and .pptx to Drive
- For each file, open Share !’ General access
- Choose “Anyone with the link” and set Viewer access
- Copy each link and test it in a private browser window
- Paste the real website URL and both Drive links in the assignment

ASSIGNMENT DESCRIPTION

Website: [paste Vercel URL]
PDF: [paste Drive link]
PPT: [paste Drive link]

These links remain placeholders until published from the owner’s accounts.

10 / CONCLUSION

What I learned

The prototype is ready locally; public hosting and Drive sharing are the remaining account steps.

- Connected the storefront with basic inventory updates
- Used browser storage to retain demo products and the shopping bag
- Added Git ignore rules for secrets, dependencies, and build files
- Next: database, secure admin login, and real checkout provider

THANK YOU
